

Objectives and Ambitions

The construction of a tower over 70 meters high meets several objectives. It aims to minimize noise impact while maximizing openness to the exterior to enjoy the exceptional panorama. Additionally, it symbolizes SBB's ambition to develop modern and profitable infrastructures, in line with a sustainable and interconnected urban vision.

Architectural Design

Architecturally, the Gleis 1 Tower stands out with a simple and elegant structure. The facade highlights a punctual prefabricated concrete structure, with concrete slabs cast in place emerging from the glass envelope to provide 50% natural shading, thus protecting the glass surfaces and reducing noise pollution.
